

SHC SERIES

NAVIGATE WITH EASE

With power steering and reduced headlength, Crown's heavy duty counterbalance stacker easily maneuvers and positions heavy loads in tight congested spaces, no matter the task at hand. Designed to perform the tasks of multiple lift trucks, the SHC Series' counterbalance design and intuitive X10® Handle optimize control and stability for safe, efficient handling of loads weighing up to 4,000 pounds.

In the trailer, on the dock, in the rack or on the warehouse floor, the SHC 5500 stacker is designed and engineered for flexibility with the strength and durability to provide long-lasting value.

Discover how the SHC 5500 Series improves load handling in tight spaces:

Maneuver With Ease

Electronic power steering minimizes steering effort and reduces fatigue, while the brake override feature facilitates operation with the handle in a nearly vertical position.

Small Footprint

Combining stacker and counterbalance truck designs eliminates the need for outriggers and adds the ability to handle block stacking and loads that exceed the width of the truck.

Clear View

Industry-leading visibility is the result of a low-profile power unit, high-visibility mast and carriage, and a center-mounted control handle.

Application Versatility

Perform the tasks of multiple lift trucks, from loading, unloading and dock work to transport and put away. A variety of optional attachments provide additional flexibility.

Performance Advantage

Crown's intelligent Access 1 2 3® Comprehensive System Control enables safe, optimized truck performance and advanced diagnostics.

Choose Crown's SHC 5500 Series for **versatile performance** and **long-term value**.
